

## Installation Procedure

1. Select a highly visible, flat surface on the case, preferably the top of a notebook or the front panel of a desktop PC, and clean the location with the alcohol swab provided. Let the alcohol dry completely. Peel the protective backing from the plate.

2. Apply a drop of gel near each corner of the plate, and two thin strips of gel over the tattoo area so the gel will cover the whole tattoo area when the plate is applied to the surface of the case.

**Warning:** Adhesive instantly bonds skin and can cause severe eye damage. Read caution statement on tube.

3. Immediately place the plate on the case before the gel begins to set. Press firmly on all four corners of the plate until you obtain a firm bond (approximately 20 seconds) – caution: the plate may slide a bit before bonding completely – then press firmly all over the plate area.

4. If excess gel appears at the edges of the plate, remove it immediately by gently scooping it away with the protective backing you peeled from the back of the plate in Step 1.

5. Apply the red warning sticker next to the plate.

**ATTENTION:** When you sell or return your equipment, **do not remove the STOP plate!** This will reveal the “Stolen Property” tattoo and render the equipment impossible to resell. Legitimate buyers of used equipment can re-register it for FREE at [www.stoptheft.com/trackset](http://www.stoptheft.com/trackset). So that used equipment can be registered without having to contact you for verification, please send STOP the ID numbers of decommissioned equipment for our records.
